(54) Method and apparatus for harnessing momentum from collisions to generate velocity.

(57) This invention relates to a method and apparatus for harnessing momentum from collisions to generate velocity. The method requires a rotating mass able to shift its centre of rotation out of alignment with a given circumference, referred to as a circular harness, such that it is able to use collisions of the mass towards the circumference to induce a net propulsive force that can be pointed in any direction and that can move independently. It achieves this by the rotating mass reversing its position every 180 degrees. This reversal is referred to as a "change in polarity" by which it is enabled to generate a propulsive force in a net direction. By applying this method through an apparatus, the apparatus may be attached to any type of vehicle to provide it with a means of propulsion.

(54) Method of Improving the Explosion Safety of Nuclear Power Plants.

(57) The invention relates to methods of decreasing the effect of blast loads on industrial spaces relating to, inter alia, nuclear power plant and large chemical manufacturing facilities. A method of improving explosion safety in closed spaces by attenuating the effect of a combustion wave or shock wave on a protected surface consists in placing obstructions before the protected surface in the form of elastic membranes filled with a flame-retardant substance. A non-flammable gas is used as the substance filling the membranes; the membranes themselves are made of a material that disintegrates during, and under the action of, displacement of the front of a combustion wave or shock wave along the surface of the membranes. The membranes are filled with a nonflammable gas immediately after flammable gas is detected at a dangerous concentration in the space in front of the protected object. The technical result consists in increasing explosion safety, decreasing the effect that an explosive wave formed in an accidental explosion of fuel-air mixtures has on the walls and floors of protected spaces.
